## *Multi-version trace reading/writing*

- What exists in LTTV
  - Strengths and shortcomings
- What exists in TMF
  - Strengths and current limitations

## *Multi-version trace reading/writing*

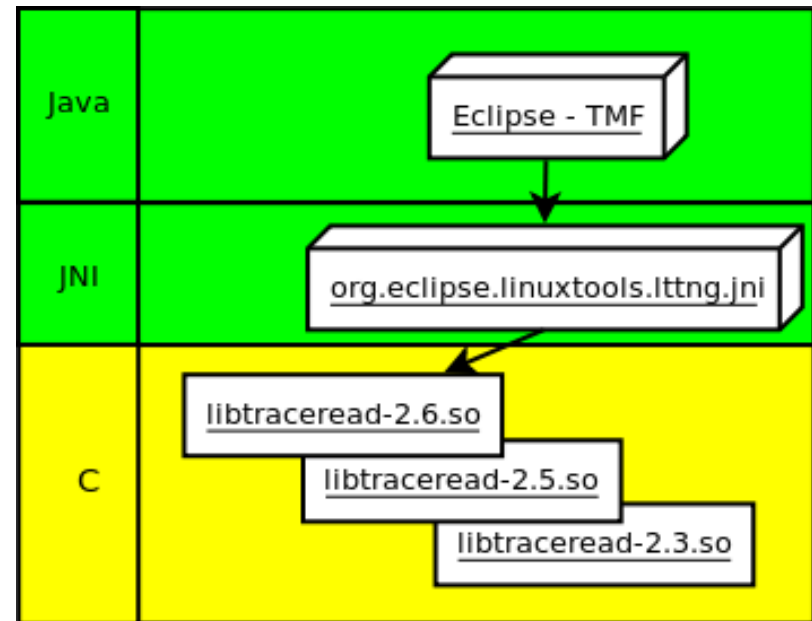

- LTTV
- 1 program per file version.
- The solution (my solution) 3 executables + 3 aliases (lttv-2.3, lttv-2.5, lttv-2.6)
- Reason: Architecture.

# Multi-version trace reading/writing

- TMF
- 1 program for all the versions
- Restriction : 1 trace version per experiment

# *Multi-version trace reading/writing*

- Known issues
- Switching repeatedly between v2.6 and v2.3 will cause bugs.
- 1 experiment per version, is it really a limitation?

## *Multi-version trace reading/writing*
